Introduction. *Neisseria gonorrhoeae* is a sexually transmitted pathogen that causes infections at the anatomic site of exposure (e.g., urethra, cervix, pharynx, and rectum) and in the eyes of newborn infants. Urethral infections often cause discharge and pain with urination; cervical, pharyngeal, and rectal infections are frequently asymptomatic.

Clinically suspected of onychomycosis, according to nail culture results, the patient was diagnosed with DLSO caused by *R. glutinis*. Antifungal therapy was initiated with 400 mg/day oral itraconazole; seven-day pulse therapy was planned at intervals of three weeks.

A Case of Onychomycosis Caused by *Rhodotorula glutinis*

April 2014â€”Dr. Nayar, professor of pathology at Northwestern University Feinberg School of Medicine in Chicago, is co-chair of the Cytopathology Education and Technology Consortium, president of the American Society of Cytopathology, and a member of the CAP Cytopathology Committee. She spoke with CAP TODAY recently about the FDA advisory committee's recommendation on cervical cancer screening.

HPV primary screening for cervical cancerâ€”an interview

Even though IQCP is an optional program, says Kerstin Halverson, BA, MS, point-of-care coordinator at Childrenâ€™s Hospitals of Minnesota, the alternativeâ€”meeting the minimum QC requirements set by CLIA â€”is often impractical.

IQCP without agony at the point of care â€” CAP TODAY

Contributing editor Dr. Pereira continues part 2 of a series on the ISO standards applicable to medical laboratories. The ISO 15189 is widely popular for laboratories, but many aspects are confusing, vague, and misunderstood.

Guidelines for Specimen Handling and Processing

INTRODUCTION. Antiphospholipid syndrome (APS) is characterized by venous or arterial thrombosis and/or an adverse pregnancy outcome in the presence of persistent laboratory evidence of antiphospholipid antibodies (aPL). APS occurs either as a primary condition or in the setting of an underlying disease, usually systemic lupus erythematosus (SLE).

Diagnosis of antiphospholipid syndrome - UpToDate

The amplification was done using GTQ-CYCLER 96 thermocycler machine (Hain Life science GmbH, Nehren, Germany). For , , and , the programme was denaturation at 94°C for 45 seconds, annealing at 52°C for 1 minute, and elongation at 72°C for a minute. For the same programme was used except that the annealing temperature was adjusted to 45°C for 60 seconds.

BioMed Research International - Hindawi Publishing Corporation

An international, peer-reviewed, Open Access journal that focuses on the optimal treatment of infection (bacterial, fungal and viral) and the development and institution of preventative strategies to minimize the development and spread of resistance.

INTRODUCTION. Extended-spectrum beta-lactamases (ESBL) are enzymes that confer resistance to most beta-lactam antibiotics, including penicillins, cephalosporins, and the monobactam aztreonam.

UpToDate

Diabetes is the leading cause of major complications, such as end-stage renal disease and lower extremity amputations, and is a significant contributor to ischemic heart disease, stroke, peripheral vascular disease, and vision loss (). There has been increasing acceptance of the importance of individualizing glycemic management and assessment of risk for adverse events, especially hypoglycemia ().

Non-tuberculous mycobacteria (NTM) are ubiquitous environmental organisms that can cause chronic pulmonary infection, particularly in individuals with pre-existing inflammatory lung disease such as cystic

fibrosis (CF). Pulmonary disease caused by NTM has emerged as a major threat to the health of individuals with CF but remains difficult to diagnose and problematic to treat.
